Cruelty in a Leaf of Bread.

Among beliefs current with sailors is the notion that it is unlucky to turn a loaf upside down after helping one's self from it; the idea being that so every loaf so turned a ship will be wrecked. It is also said that if a loaf parts in the hand while being cut it bodes disaster in the family—the separation of husband and wife. Again, it has been a widespread belief that the whereabouts of a drowned body may be ascertained by floating a loaf of bread down stream, when it will stop over the spot where the body is. A curious exception of a body thus recovered near Hull, Yorkshire, [illegible] years back in the Gentleman's Magazine. After different ineffectual [illegible] had been made in the river for the child, to the purpose, a twopenny loaf with a quantity of quicksilver in it was cast floating down the stream, when the child was supposed to have fallen in, which, passed the very place where upward of half an hour, when the body appeared to be on the contrary side of the river, the loaf suddenly sank about and began among the rushes, and presently sank near the child, when both the child and the loaf were brought up with grapples ready for the purpose.

A correspondent of Notes and Queries [illegible] that it is a custom in Kent for a loaf and quicksilver [illegible] the position of the body, as the weighted loaf is carried by the current. But as the body is. This practice [illegible] prevails on the continent, and in Germany the usage of the dropped loaf [illegible] in the place of bread, while in Paris on Saint Sebastian's and St. Nicholas, with lighted wax tapers in them, have generally been used for that purpose.—Waverley Magazine.

Exercise for Chest Development.

Exercises of strength lead rapidly to an increase in the size of the chest. It is the chest that exercises of speed when they need very especially active muscles. [illegible] [illegible] [illegible]

IF YOU WISH TO BE HEALTHY FILTER THE WATER YOU DRINK

THERE IS NO GREATER BLESSING THAN GOOD WATER. Men have lived without Food for FORTY DAYS; but no man ever abstained from water for more than Nine Days and survived. Good Water is a source of Health and Vigor, Bad Water is a prolific source of Disease and Death. The very highest authority on Hygiene asserts that "this much seems to be certain: that as precise investigations proceed, and, indeed, in proportion to the care of the inquiry and the accuracy of the chemical examination, a continually increasing class of diseases is found to be connected with the use of BAD WATER.

Disease Germs.

The most dangerous impurities in drinking water are the so-called Disease Germs. The best authorities hold that certain diseases known as ZYMOTIC DISEASES, are propagated or transmitted by a peculiar class of low organisms, which find their way into the system through channels of air, food and water, mainly by water. Of these diseases, Malarial Fevers, Typhoid Fever, Scarlet Fever, CHOLERA and Diphtheria are the most notable. It is believed by many who have studied these subjects, that Typhoid Fever, Scarlet Fever, and Diphtheria will never attack those who habitually use, for all purposes, properly filtered water.

Where they [illegible]

And [illegible]
To the heroes of [illegible]
Oh, [illegible]
[illegible]
When I think of his wonderful deed I'll [illegible]
Some day—not now.

Sometime in the beautiful future I'll sing
A song that more clear than a trumpet shall ring,
Some day when I feel my heart shall through and through
With a love of the lovely, the true and the true,
When my heart is thrilled with heavenly fire,
And the wrongs of humanity fill me with ire,
Oh, then I will sing such a song of song,
Such a cry for the right, such a blow at the wrong!
Some day—not now.

Sometime I will lay all my conscience by,
And will cautiously look the bold world in the eye;
Some day I will dare the fashionable of the hour,
And will bid high defiance to custom and power;
Yes, vain to attack me with sneer or with frown,
When my black flag you see me contemptuously fling it.
Oh, I take off my cap and I drop on my knee,
And I worship the man I am going to be
Some day—not now.

Sometime I will suddenly, quietly prove
That a man can jolt out of his natural groove;
Some day I'll leave all my follies behind,
All my faults I will accurately cast to the wind,
Emerging at once from the man I have been,
Like a serpent is cast to crawl out of his skin.
Oh, it gives me such comfort to know I shall stand
With those who'll be valiant and noble and grand
Some day—not now.

—George Horton.

Wandering Jews.

It is remarkable that Emin Pasha should be a Jew by birth, and one of his rescuers—Vita Hassen—a Jew by profession. But the presence of these Jews in Equatorial Africa does not stand alone. From the time of Abraham downward the migratory instinct has been dominant in the race. Mesopotamia, Canaan, Egypt, Canaan once more, Assyria, Babylonia, Persia, Canaan a third time and then the world at large—such are the successive stages of Israel's national migrations. The Jews, indeed, have ever been the "tribe of the wandering foot." In an age when movement from one country to another was a rare and hazardous proceeding—in the Twelfth century, to wit—Benjamin of Tudela and Petachia of Ratisbon traveled through a great part of Europe, Asia and Africa, and were thereby able to make considerable additions to the world's knowledge. The second Benjamin and Halevy, who explored the Falashas, may also be mentioned. The existence of Jews in out-of-the-way corners of the globe, the Falashas and Beni-Israel and the Cochin Jews, has only been made possible by the migratory tendency of the race. The four young men who kept Yom Kippur in so queer yet so touching a fashion in the wilds of South Africa are among the latest illustrations of the tendency. No doubt the wandering instinct has been strengthened by persecution, but now that peace and quietness are his in greater measure, the Jew still retains his predilection for travel.—London Jewish Chronicle.

A Little Accident at Balmoral.

The queen has been present at very few concerts for many years past. She occasionally has a noted artist to sing or play before her; but this always takes place in private, and when I sing at Balmoral there is nobody in the room but the queen and perhaps one or two of the royal family who may be staying at the castle. With regard to these little concerts, I recall a funny incident. I sat down at the piano to accompany myself, and was just beginning to sing when the legs of the stool gave way, and I rolled on the floor at the queen's feet. Her majesty was rather concerned at first, thinking I must have hurt myself, but when she saw I was all right she burst out laughing. We all had been rather solemn before, but after my tumble everybody was so amused that it was a long while before I could proceed with my song.—Mme. Albani.

Dressing "Fast."

The old custom of dressing oneself into a walking advertisement of one's profession is fast becoming obsolete. Some of my loudest dressing customers are lawyers and doctors who have grown tired of being mandes with their avocation. I don't mean to say that ministers, too, are getting to be loud dressers, but even they are making concessions that were not dreamed of ten years ago. There's a wide margin for artistic and tasteful dressing outside of black, and a wide range of handsome and wholly desirable fabrics other than broadcloth, doeskin and farmers' satin, even for professional men to choose from. It's not so much the color or the cut of the garment that makes it quiet or loud, but the way it is worn.—Tailor in St. Louis Globe-Democrat.

His Fate.

Some people learn in early childhood what others are half a lifetime in discovering. Mr. T. A. Trollope tells a true story of a little boy, a relative of his own:

The child, a fine little fellow of 3 years, said something of which his mother disapproved, and she proceeded to reason with him.

"I do not like to hear you speak in that manner. You mean to be funny, but you are simply rude."

The little fellow burst into tears, and said, amid his sobs:

"There, mother, you have the secret of my life. I am always meaning to be funny, and I turn out rude."

Poor boy! He was not alone in his affliction.—Youth's Companion.

It is a law of good society in China that young widows never marry again. Widowhood is therefore held in the highest esteem, and the older the widow grows the more agreeable does her position become with the people. Should she reach fifty years, she may, by applying to the emperor, get a sum of money with which to buy a tablet on which is engraved the sum of her virtues. The tablet is placed over the door at the principal entrance to her house.

The Act of a Friend.

Wittix—I did you a great favor while I was waiting for you.

Critax—Much obliged to you, old man. What was it?

Wittix—I cut the leaves of Gusher's book, which you slashed up so in your last review column.

Critax—Thanks, awfully.—Harper's Bazar.

Spartan Sociology.

Every student of history knows that the Spartans worshiped the beautiful and the useful, and that they took the means to get them. Bodily perfection and mental activity were attained by well appointed exercise and healthy parents. The sickly and the constitutionally diseased were not allowed to marry; the healthy were punished if they did not marry. Men that were unmarried after a certain age were excluded from the society of women, and once a year were exhibited to public as a warning to other and younger men. Young men and young women were not allowed to marry before they had attained maturity or cut loose from parental leading strings. The Spartan [illegible]

signs of any of the diseases that are transmissable to the offspring, and further there other qualifications must satisfy that so far as they can learn there is no reason to believe that the marriage will be otherwise than in accord with sanitary laws. We, as a people, are taking more interest in the proper kinds of physical culture than before. Our women are coming to know that they can dress just as well without disturbing their bodies and impeding their health. But the day of the truly sanitary marriage is a long way off. Meanwhile a great many people are getting married that should remain single.—Chicago Herald.

SOME WONDERFUL WELLS.

A TRIO THAT PRESENTS EXTRAORDINARY FEATURES.

Geysers, Blowers and Gushers—Wells from Which the Wind Whistles, and One Possessing Remarkable Electrical Properties.

Today's excursion among wonders and marvels shall be taken beneath the surface of the earth. In a description of the location and character of "wonderful wells."

The old time well, with its long "sweep" and single rope and bucket attached, or the more modern windlass, with its labor saving device of two buckets attached to a single rope, wound around a cylinder in such a manner as to let one bucket down while the other one is coming up, the same that was known to and so graphically described by the author of the "Old Oaken Bucket," or even the present wooden or iron pump with its manifold attachments, are common objects in every small city and in the rural districts. It is not these, but others dug on similar plans, which it is proposed to describe under the above caption.

A BRITISH FREAK.

One of the most remarkable of the many wells, when the reader will be willing to dub as "wonderful" before he has finished this assertation, is on the edge of the Bridlington harbor, in Yorkshire England. This well was dug in the early part of the present century and was first described in a paper read by Dr Storer to the Royal society. The bottom of the Bridlington harbor is composed of a gravelly, porous clay. In boring the well this stratum was penetrated and bored through its entire depth and into a bed of other and more solid clay below. A copper lining was provided and the sides of the well properly secured. When the first tide arose after the well was finished it flowed to within fifty inches of the mouth of the boring.

This was nothing angular within itself, it having regularly so flowed during the four weeks that work on the well was progressing; the well itself furnished the free show. Before the tide had reached within thirty yards of the well the water began flowing from the mouth and by the time it had reached its maximum height, was gushing out in torrents. The water from the well was perfectly fresh, although the sea water flowed to within less than five feet of its mouth. As the tide recedes the fountain gushes with less and less impetus until at last it disappears from view in the cavernous depths of the well, only to reappear and form a perfect fountain when the next tide flows.

THE SIERRA BLANCA FOUNTAIN.

An American wonder, similar in many respects to Johnny Bull's Yorkshire marvel, and which was fully described in the columns of the old Republican some three years ago, is the Sierra Blanca magnetic well on the Texas and Pacific railroad, in El Paso county, Texas. The well was drilled on the artesian plan in the spring and summer of 1884. Some little water was obtained and prospects were bright until a depth of over 600 feet had been reached, when the tools suddenly dropped into a cavern, the bottom had in reality "fallen out," and they were treated to a rush of cool—not water, but air. Correspondents by twos, by angles, by dozens and by scores visited it and telegraphed the results of their observations to the leading papers of the land. One of these, in speaking of the similarity of the ebb and flow of air to the same phenomena as exhibited in ocean tides, says:

"From 10:15 a. m. to 10:15 p. m. a current of air rushes out of the pipe with a sound resembling the noise made by a locomotive blowing off steam, and so loud that it can be heard for forty or fifty yards. At 10:15 p. m. the overflow of air ceases and a strong suction sets in which lasts for the next twelve hours, this ebb and flow continuing day after day, and it has been observed by horsemen that whenever they get in the neighborhood of this well strong magnetic forces are felt and sparks given off if the horse's mane is touched."

THROW STONES.

Mr. Peter Taylor, of Sarnia, Ontario, was more fortunate than the Texas Pacific in getting something tangible from his roaring well, which was sunk some years since in the suburbs of the city above mentioned. The well, which had been drilled to a depth of about 150 feet before it developed abnormal propensities, was situated some 300 yards south of his house, which is one of the largest and finest in Sarnia.

As soon as the cavity had been penetrated the rush of air, which, by the way, was expelled with much greater force than that from the Sierra Blanca well, was accompanied by millions of pebbles and bushels of sticky yellow clay, the pebbles varying in size from about the bigness of a hickory nut up to some which were almost as large as a man's head, the latter weighing from eight to fifteen pounds. That these stones were expelled with great force may be guessed from the fact that they were thrown hundreds of feet high, many of them going entirely over the Taylor residence, which, as above mentioned, stood 300 yards north of the well.

During the time of this remarkable display there was a constant, ever increasing roar issuing from the bowels of the earth through the well, the smallness of which seemed likely to check the pent up forces in their subterranean boiler and save the whole town from a coating of clay and a bombardment of rocks. It was about 4:30 o'clock in the afternoon when the first premonition of coming trouble was noticed in gurgling sounds proceeding from the well, and for about an hour and a half, or until 6 p. m., Taylor's home made geyser was the wonder of all that part of Canada able to get within hooting or to catch a glimpse of the cone shaped column of mud, stones and water that were being shot into the boreal atmosphere.—John W. Wright in St. Louis Republic.

Majority and Minority Reports.

A strong Argument in Favor of the Change.

AUGUSTA, Feb. 5. Though not formally presented in the House, the majority and minority reports upon the new code of rules proposed have been filed with the committee clerk and ordered printed. The majority report is in great detail, explains the differences between the proposed code and the previously in force, but in most instances the explanation is unencumbered by any argument.

Relative to the rule authorizing the Speaker to count a quorum, the report says: Rule 14 directs the method of ascertaining a quorum when members present refuse to vote on a roll call. The process of ascertaining the presence of a quorum to do business under the rule would ordinarily be under the direction of the Speaker, who would

Derive his information

from his own senses or by the aid of a messenger anyway that would satisfy him as the secretary of the senate. Under the system of roll calls it has been deemed necessary to ascertain and announce

Foreign Fruit.

The two new varieties of trout spawn from foreign waters to be used in stocking Maine rivers, were expected in New York last week by the Cunard liner Servia. For several years the United States Fish Commissioners have been at work on the varieties, with a view of experimenting, and the piscatorial immigrants are in line with this work. Of lake trout, from the Waters of Switzerland, about 20,000 eggs are expected.

The other importation is a variety of trout called Salbising, found in Germany, and there will be about 12,000 of these eggs in the consignment. They are coming in 20-inch cases, and are packed on trays of wooden frames, having [illegible] bottoms. The eggs are covered with moss. The case is so constructed that ice will be in it under the moss, keeping the eggs cool. The eggs will be sent of the United States Fish Commissioner's hatchery at Bucksport.

They are sent by W. August Carlin of Malvern Wells, England, the Secretary of the National Fish Culture Association of England, and in return the United States Fish Commissioner sends 20,000 eggs of American brook trout.

[illegible]

Rangeley Club Meeting.

The Rangeley Club meeting in city Hall Sunday was largely attended and the following programme was finally rendered: Music, by the Orchestra; devotional exercises, Chaplain Stevens; music, Arbuckian Quartette; remarks, President Chalmers; song, Mrs. Helen Winslow Foster; remarks, Mr. Stevens; music, orchestra; music, Mrs. Potter and Arbuckian Quartette; presentation of the pledge, by Mr. Jeffard; music, Arbuckian Quartette. An excellent programme has been arranged for next Sunday, and all are cordially invited.

MAINE HOMES IN DEMAND. The party of New York men who passed through the city last week on a trip through the State buying farms, and who since being here have visited several places in the northern part of the State, in search of fine specimens of horseflesh, arrived in the city Saturday evening. Yesterday they saw some valuable blooded horses belonging to Ranger men and opened negotiations with the owners, with the result that three horses became their property. Hon. J. P. Baxter sold them "Gen. Wilkes, Jr.," old, his sacral mare, and Mr. C. S. Ireland his gray gelding. Mr. Ireland obtained quite the full price. Some of the New York men are looking for farms, [illegible]

[illegible]

Hall Burned.

[illegible] was discovered in the upper story of Winslow Hall, northerly end of Hall, Maine State College, Sunday forenoon at eleven o'clock. The fire had progressed far as to be beyond control and the building was entirely destroyed. This building cost $18,000 and was insured for $10,000. Some furniture and drawing materials on the ground floor were saved. Several students who lodged in the upper story of the building lost everything. No one attempt to know exactly what caused the fire, as at that time most of the students were attending church services in the village two miles distant. The fire department of Orono, Old Town and Upper Stillwater responded promptly, which with the water works at the college kept the fire confined to that building, although the wind blew strongly at the time.

The building which was destroyed was used for recitation rooms and about a dozen students roomed there. Their loss will not be a small one, as all their personal effects were destroyed by the flames, and one of the students lost a considerable amount of money. It is thought that with [illegible]

Resolutions of Respect.

At a regular meeting of Anchor Lodge, No. 4, A. O. U. W., the following resolutions were unanimously adopted:

Whereas, in view of the loss we have sustained by the decease of our friend and brother Workman, Thomas O'Leary, and the still heavier loss sustained by those who are near and dearest to him, therefore,

Resolved, That it is but a just tribute to the memory of the departed to say that in departing from our midst we cherish for one who was in every way worthy of our respect and regard and a faithful member of the order.

Resolved, That we extend to the wife and family of our late brother our sympathy in their sudden bereavement, and commend them for solace to Him who rules upon the heavy stroke.

Resolved, That a copy of these resolutions be transmitted to the wife and family as a sincere reminder that we share with them in their sorrow and affliction.

Resolved, That a copy be also spread upon the records and another furnished for publication in THE DAILY WHIG and Commercial.
